# One source of truth. Every channel aligned.

## One schedule for your website, attendee app and print-ready agenda.

Stop maintaining three competing versions of your conference program. AssemblyPilot centers connected conference operations on a shared schedule record—with registration, committee planning and financial review around it.

EDIT ONCE. PUBLISH CONSISTENTLY.

Update a session time or room in the shared program. The connected website, attendee app and newly generated print-ready agenda draw from that same record, within the agreed setup.

Already-printed paper does not update: regenerate and reprint after changes.

## Connected operations. Lasting committee knowledge.

Registration and authorized check-in • Shared documents and speaker tracking • Sponsorship forecasts and expense approvals • Reviewed payout reporting • Attendee schedules, digital badges, venue resources and opt-in networking

## Your payment system. Your funds.

Checkout through your payment provider, with funds settling directly to your bank. AssemblyPilot never receives, holds or disburses registration revenue.

### Built from a working conference implementation

Ignite 27: approximately $400/year in legacy subscriptions removed; 99 transactions compared with provider data. Historical subscription reductions, not net savings. Results are not guarantees.

Features and connections depend on agreed scope. RegFox is the reference integration; other providers require validation. Platform/service fees are separate. Reporting supports review, not certification of bank deposits.

## See one source of truth in action.
